INTRODUCTION

I'm a Software Engineering graduate with expertise in Flutter, React, Node.js, Firebase and Python-based AI systems. Proven ability to build end-to-end applications from UI to backend, API, and model integration. Passionate about building scalable, real-world software that solves practical problems. Always eager to learn new technologies and continuously improve my skills to stay up to date and align with the industry trends.

EDUCATION

Bachelor of Science in Software Engineering

COMSATS University| Lahore Campus | CGPA: 2.97

2022 – 2026

EXPERIENCE

Flutter App Developer Intern

Punjab Information Technology Board (PITB)

July 2025 - September 2025

- Developed and maintained Flutter application using MVC architecture and state management that made my code 70% clean and 20% fast.
- Created responsive, user-friendly mobile interfaces optimized for every Android device using modern UI/UX standards.
- Implemented Firebase authentication and Firestore database integration so user can stay secure and store data.
- Collaborated with a professional dev team of 10+ people using industry workflow and understanding them.

SKILLS

- **Language:** Dart, Python
- **Mobile:** Flutter, MVC, State Management
- **Web:** React.js, Node.js, Express, Tailwind CSS
- **Databases:** MongoDB, Firebase
- **AI/ML:** Computer Vision, Model Training (Colab)
- **Tools:** GitHub, Postman, Vs Code, Android Studio
- **Soft skills:** Teamwork, Communication

PROJECTS

KOKORO DOJO APPLICATION | Flutter, Computer Vision, Fast API | Martial Arts App

January 2025 – November 2025

Final Year Project of martial arts app. This app consists of user-authentication, progress tracking, training lectures, user profile, chatbot, and AI model that is trained using different datasets with accuracy of 90+ and it tells the user if they are using the right technique to train. Mainly it's a posture analysis model using Computer Vision.

BOOKS MANGEMENT SYSTEM | MERN Stack | Full Stack Development

July 2024 – July 2024

Books management system that is built in MERN Stack using the platform VS code and tool postman for API verification.

TEK DARAZ SHOPPING WEBSITE | React.js, Node.js, Mongo | MERN Stack

Aug 2024 – Aug 2024

Mobile Teach Shopping website made to help millions of users all over the Pakistan to buy anything from their comfort zone. Admin panel for the admin to upload products and manage them and keep track of the orders. Fully SEO optimized with slugging and AI.

CODE SMELL DETECTION | Python, Flask | Tool

November 2024 – December 2024

Code Smell Detection tool build using python to detect the code smells in the whole project or just a file of python code. Using Flask to render frontend.

NUMBER PLATE DETECTION | Python, Django | Image Segmentation

November 2024 – December 2024

Programmed in Python with accuracy of 70% to detect the car number plates. Django used to render frontend and to save the segmented images.

AMERICAN SIGN LANGUAGE PROJECT | Python | AI C Automation

October 2024 – December 2024

ASL improved with the accuracy of 90% to detect the hand sign for the people with disabilities. AI Model trained on Google teachable machines.
